My 5

From Chapter 9, "Add your own five", and step 4 of Chapter 10's BUILD STEP. One block per miss. Five of those.

Miss 1	
Question number	
Why you picked the wrong answer	
What made the wrong answer tempting	
What principle makes the right answer right	
Distilled to one line for the card	

Miss 2	
Question number	
Why you picked the wrong answer	
What made the wrong answer tempting	
What principle makes the right answer right	
Distilled to one line for the card	

Miss 3	
Question number	
Why you picked the wrong answer	
What made the wrong answer tempting	
What principle makes the right answer right	
Distilled to one line for the card	

Miss 4	
Question number	
Why you picked the wrong answer	
What made the wrong answer tempting	
What principle makes the right answer right	
Distilled to one line for the card	

Miss 5	
Question number	
Why you picked the wrong answer	
What made the wrong answer tempting	
What principle makes the right answer right	
Distilled to one line for the card	

The book's worked example (Chapter 9)

The miss	pick "add a retry loop" for a tool that returned a 401
Why you picked the wrong answer	I picked it because retrying feels like thorough error handling
What made the wrong answer tempting	it was tempting because the question framed the failure as intermittent
What principle makes the right answer right	the right answer is "don't retry a 401" because auth failures never succeed on retry, they need classification, not mechanics
Distilled to one line for the card	*"My reflex is to retry everything, but auth and validation errors never retry."*
